ABSTRACT

Statistical data on trends and degrees and diplomas obtained by Indians at South African universities during the period beginning July 1, 1970 and ending June 30, 1981 are presented by means of tables, graphs, and charts prefaced by a brief narrative summary. The following degrees/diplomas are covered: first bachelor's, honors bachelor's and postgraduate or second bachelor's degrees, master's degrees, doctor's degrees, undergraduate diplomas, and postgraduate diplomas. A number of faculties are distinguished, along with specialization fields within each faculty. Attention was paid to sexual composition and growth rate during the period for degree/diploma, faculty, and field of study. During the 1970-1980 period, arts and education were the most popular fields for the first bachelor's and honor's degrees, whereas for master's degrees, the emphasis shifted to the commercial and management sciences. The data seemed to show a proportional decline in the number of female graduates as the level of study rose. Compared with data of the previous decade, however, the percentage of women obtaining different degrees rose. (SW)

PREFACE

In view of the shortage of trained high-level manpower and the need for careful planning to ensure its optimal utilization, the different labour sectors periodically require information on available and potential high-level manpower. This research was conducted in order to fulfil the above need, particularly since most of the RSA's high-level manpower comes from the ranks of people with university training.

The research on graduation trends in respect of Indians at South African universities and on the provision of high-level manpower can also supply the information that guidance teachers require to make meaningful vocational and study information available to pupils.

A further aim of this report is to provide for the particular needs of researchers and institutions in view of the frequent requests for information inter alia on graduation trends that the HSRC receives.

Because of the important role played by professionally trained people in respect of a country's productivity, there is a continuous need for up-to-date information on the manpower situation. It has therefore been decided to review and update this report every five years.

SAMEVATTING

Die doel met die ondersoek was om 'n analise te maak van verskeie aspekte van die grade en diplomas wat deur Indiërs, gedurende die jare 1970 tot 1980, aan die onderskeie Suid-Afrikaanse universiteite verwerf is.

Die data van die Indiërgraduandi is gerekenariseer en die verskillende grade en diplomas op die onderskeie studievlakke is geklassifiseer volgens bepaalde fakulteite en spesialiseringrigtings. Die groeikoers ten opsigte van die getal grade en diplomas in die verskillende fakulteite is, waar moontlik, aangedui.

Met betrekking tot die geslagsamestelling is gevind dat die persentasie vroue 'n stygende tendens toon betreffende die onderskeie grade. Uit die gegewens blyk dat die vroulike graduandi met gevorderdheid van studie egter proporsioneel afneem.

Gedurende die tydperk 1970 tot 1980 was lettere en wysbegeerte en opvoedkunde die gewildste rigtings wat eerste baccalaureus- en honneursgrade betref. Die hoogste persentasie magistergrade is in handels- en bestuurswetenskappe behaal.

Die totale getal grade en diplomas wat jaarliks toegeken is, het geleidelik toegeneem van 1970 tot 1980. Die gemiddelde groeikoers ten opsigte van die onderskeie studievlakke was soos volg:

- . eerste baccalaureusgrade 12,10 %
- . tweede baccalaureus- en honneursgrade 16,36 %
- . magistergrade 9,39 %
- . doktorsgrade 4,14 %
- . voorgraadse diplomas 5,44 %
- . nagraadse diplomas 8,24 %

ABSTRACT

The aim of the investigation was to make an analysis of different aspects of the degrees and diplomas obtained by Indians at the various South African universities during the period 1970 to 1980.

The data in respect of the Indian graduates was computerized and the different degrees and diplomas on the various study levels were classified according to specific faculties and specialization fields. The growth rate in respect of the number of degrees and diplomas in the various faculties (where possible) was indicated.

With regard to the sexual composition it was found that the percentage of woman shows a rising trend with respect to the different degrees. From the data it appears that there was a proportional decline in the number of female graduates as the level of study rose.

During the period 1970 to 1980 both arts and education were the most popular fields with regard to first Bachelor's and Honours degrees. The highest percentage of Master's degrees was obtained in commerce and administration.

The total number of degrees and diplomas awarded annually increased progressively from 1970 to 1980. The average growth rate in respect of the different study levels was as follows:

- . first Bachelor's degrees 12,10 %
- . second Bachelor's and Honours degrees 16,36 %
- . Master's degrees 9,39 %
- . Doctor's degrees 4,14 %
- . undergraduate diplomas 5,44 %
- . post-graduate diplomas 8,24 %

1. THE CONTEXT OF THE INVESTIGATION: STATEMENT OF PROBLEM, AIM, CONCEPT ELUCIDATION, COLLECTION OF DATA, METHOD OF ANALYSIS AND STUDENT NUMBERS

1.1 STATEMENT OF PROBLEM

In view of the shortage of trained high-level manpower and the need for careful planning to ensure its optimal utilization, the different labour sectors periodically require information in respect of available and potential manpower. This has given rise to a need for a publication on graduation trends at South African universities.

Research on graduation trends has also been undertaken in the past by inter alios Garbers (1960), Uys (1972), Van Rensburg, F.A.J. (1972, 1974, 1977) and Van Rensburg, L.S.J. (1977, 1978).

This report is part of a series and involves Indians only. Similar reports are available on graduation trends in respect of Whites, Coloureds and Blacks.

1.2 AIM

The aim of this investigation is to provide an indication of trends in the awarding of degrees and diplomas to Indians by South

African universities during a particular period (1 July 1970 to 30 June 1981). No projections were made on the basis of the observed trends in view of the largely unpredictable nature of the future economic, political, social, cultural and technological situation.

1.3 CONCEPT ELUCIDATION

A number of definitions of terms used in this report are given here in order to eliminate possible confusion.

First Bachelor's degrees refer to those degrees that can be obtained with matriculation exemption or an equivalent qualification as entrance requirement. Where a first Bachelor's degree or an equivalent qualification is an entrance requirement for a further Bachelor's degree, the latter is regarded as a post-graduate or second Bachelor's degree, for example B.Ed. (education), B.D. (theology) and LL.B. (law) (see 3 for further particulars). It should also be noted that the Doctor's degrees in 5 include all D. degrees as well as Ph.D., D.Phil. and D.Litt. et Phil. degrees.

Although tertiary diplomas are awarded by inter alia technikons, technical colleges, teachers' training colleges, nursing colleges and agricultural colleges in addition to universities, only those diplomas awarded by universities are included in this report.

An undergraduate diploma can be obtained by anyone with a senior certificate or an equivalent qualification. A post-graduate di-

ploma, however, can be obtained only by someone holding a Bachelor's degree or an equivalent qualification. In this report the word diploma includes the term certificate.

The different degrees and diplomas mentioned in the report are classified according to faculties, for example arts, medicine and education. The particular degrees and diplomas awarded in each faculty are indicated as well as the specialization fields. In the faculty of arts for instance, the degrees awarded are B.A., B.Bibl. and B.Mus. with specialization fields that include a general study field, librarianship, drama and music.

Because most of the students only received their degrees or diplomas at the beginning of the year following the year in which they completed the course, a statistical year extending from 1 July to 30 June of the following year was used throughout in this report. The year 1970 therefore means the year from 1 July 1970 to 30 June 1971.

1.4 COLLECTION OF DATA

The first sources of information that were consulted were the programmes of the graduation ceremonies of the different South African universities. Since neither sex nor population group is indicated in these programmes, the address lists of the universities were subsequently consulted (where the sex and in most cases

the population group are indicated when more than one population group are involved). In a number of doubtful cases and/or where the population group was not indicated, residential addresses were used as a guideline.

The annual reports of the Department of National Education as well as the statistical returns submitted to this department annually by the universities, and the annual statistical returns of students and personnel as at the first Tuesday of June were used as a further means of control.

1.5 METHOD OF ANALYSIS

In order to determine graduation trends in particular study fields and/or professions, the particular data of the universities over a period of 11 years were analysed separately and tabled collectively. These data were subsequently scrutinized from various angles.

1.6 THE RATIO OF THE NUMBER OF UNIVERSITY STUDENTS TO THE SIZE OF THE INDIAN POPULATION

The ratio of the number of university students to the size of the Indian population is indicated in Table 1.

The data in Column B represent the mid-year estimates of the Central Statistical Services (1982: 1.4). In these estimates the figures for the 1970 and 1980 census years were adapted for underestimates and the other years reviewed accordingly.

The number of registered students per 1 000 of the population increased from 5,3 in 1970 to 14,0 in 1980. The mean number of students per 1 000 of the population for the eleven years is 9,3. During the period 1959 to 1969 the number of registered Indian students per 1 000 of the population increased from 3,27 to 5,67 (Van Rensburg, F.A.J., 1972: 1). The number of registered students per 1 000 of the population increased almost fourfold between 1959 and 1980.

In view of the socio-economic progress made by the Indians and their enhanced political status under the new dispensation, the number of students per 1 000 of the population can be expected to increase even further.

NO ANNUAL GROWTH RATE IS CALCULATED IN RESPECT OF THE TOTAL
NUMBER OF UNDERGRADUATE DIPLOMAS IN ARTS FOR THE PERIOD 1971
TO 1980 BECAUSE NO UNDERGRADUATE DIPLOMAS WERE AWARDED IN
1973 AND 1974. THE AVERAGE GROWTH RATE FOR THE TOTAL IS
8.01% AND FOR BOTH MALES AND FEMALES 0.00%.

8. BRIEF OVERVIEW OF THE INVESTIGATION

This study is an analysis of trends in the awarding of degrees and diplomas to Indians by South African universities during a particular period.

Apart from first Bachelor's degrees, attention was paid to Honours degrees (including post-graduate Bachelor's degrees), Master's and Doctor's degrees as well as undergraduate and post-graduate diplomas. A number of faculties were distinguished in respect of each of the above qualifications, and the different study fields (degrees and diplomas) as well as the specialization fields in each of the faculties were discussed separately.

Attention was paid particularly to sexual composition and the growth rate during the particular period in respect of the different faculties and (where possible) the different study fields, specialization fields and study levels in each faculty. From the data it appears that there was a proportional decline in the number of female graduates as the level of study rose (see Table 8).

Compared with the data of the previous decade, however, the percentage of women shows a rising trend with respect to the different degrees.

During the period 1970 to 1980 arts and education were the most popular fields with regard to first Bachelor's and Honours de-

grees, whereas for Master's degrees the emphasis shifted to the commercial and management sciences. A total of 20 Doctor's degrees were awarded in seven different study fields during the particular period, including six in the natural sciences.

Table 8 gives a review of the total number of degrees and diplomas as well as the combined total number of degrees and diplomas awarded on the different study levels as well as on all the study levels combined. It reflects the figures for each year from 1970 to 1980 as well as for the whole period combined. The figures are given for males and females separately as well as for the sexes combined. The numbers of degrees / diplomas awarded respectively to males, females and males and females combined on each of the different study levels in a particular year (or for the total period) are all expressed as a percentage of the combined total number of degrees and diplomas awarded to respectively males, females and males and females combined in that particular year (or for the total period).

The total number of degrees and diplomas awarded annually on the different study levels, increased progressively from 1970 to 1980.

In Table 8.1 a summary is given of the total number of second bachelor's / honours, master's and doctor's degrees in the different specialization fields according to sex for the period 1970 to 1980.
